

MORIZA

Glufosinate P 10%

Non-selective herbicide with both contact and systemic action for the control of annual and perennial grasses and broadleaved weeds in maize (from fruiting stage), cassava (after 5 months), plantations and non-cropped areas. Glutamine synthetase inhibitor: accumulates ammonium ions and inhibits photosynthesis.

APPLICATION GUIDE

- Direct spray mist to the target grass at 1.2m – 1.8m spray diameter, depending on wind direction, release pressure, field of spray and applicator's speed.
- Maintain normal walking speed whilst observing spray mist-weed contact to ensure required/adequate solution volume is delivered onto the target weed.
- Avoid "swinging" of spray nozzle on target grass, to ensure uniform dispensation of spray solution to target grass for uniform result observation.
- When spraying in an economic crop, ensure not to spray the plant leaves or any part that can absorb the chemical into the economic plant.
- For application in maize, cassava or other economic crops, ensure the plant grows to a height where the chemical cannot touch/drift onto the leaves to cause economic damage.
- **For product trials, always rinse the sprayer tank before the next dosage.**
- Ensure to use a well functioning sprayer
- Use clean water, free of debris (sieve appropriately)
- Fix and use 2.4m diameter nozzle (Flood) for non-cropped fields and crops with inter-row spacing above 50cm. For other applications, choose the appropriate nozzle.
- Double-rinse the knapsack sprayer and lance by pumping out clean water.
- Half fill the tank with water and measure the appropriate dosage into the knapsack. *Add sticker if rainfall is expected in less than 3 hours.*
- Fill the sprayer tank with water to 15L and mix the solution by pumping and spraying into the tank, while stirring.
- Ensure there is no leakage before mounting the knapsack sprayer.
- Pump out spray solution whilst maintaining normal pressure for a fine spray mist.

Dosage:

60ml-80ml per 15L
knapsack
